- The Contractor shall adhere strictly to all manufacturers' recommendations with respect to temperature and surface conditions set forth for the particular product literature unless otherwise approved in advance by the LHA.
- Nothing in the scope shall be deemed to reduce the manufacturers' recommendations.
- In an attempt to mitigate returns visits to the work area, every effort should be made by the Contractor to remove all hardware that is not to be carpeted or tiled over with transition reducer or edge trim and moldings applied before carpet/tile is installed so that carpet/tile is fitted in a "Gripper Bar" fashion. Such items include but are not limited to plates, baseboards, moldings, rubber and metallic reducer/edge/trim/transition kits and similar items already installed that are to be replaced. Removal of these items are required to completely apply adhesive and carpet/tile under the items and adjacent surfaces receiving carpet/tile and reduce the amount of cuts required.
- Following completion of carpeting/tiling operations in each space or area, have all items reinstalled that were not a part of the "Gripper Bar" installation process.
- The Contractor shall schedule and perform cleaning of substances (including oil and greases) from all substrates that could impair the bond of the various carpet/tile systems or cause telegraphing before actually applying new adhesive so that no cleaning agents or treatments, contaminants, old carpet/tile backing, adhesive, dirt, dust, or debris developed from the cleaning and surface preparation process will fall onto or remain on the subsurface or adjacent area causing a degradation in overall appearance, visible damage, soiling, adhesive failure, delaminating and dimensional stability.
- Inspect surfaces and fill all cracks, gouges, holes, and abrasions with compounds suitable for each substrate (e.g. spackle, plaster, or cement patching compound). No adhesives shall be applied on areas until the substrates are cured and dry.

INSTALLATION

- The Contractor shall uniformly apply adhesives and sealers using direct glue down and weighted carpet/tile roller procedures to ensure proper adhesive transfer using manufacturer's directions and recommendations, and material compatibility for each substrate using trowels, brushes, rollers, or other pre-approved applicators using techniques best suited for substrate and type of material being installed.
- Spray on application of adhesives or sealers shall not be permitted unless specific permission has been secured in writing from the LHA. The Contractor shall supply verification from the manufacturer that the existing surfaces and materials are entirely suitable for this type of application and provide on-the-job demonstration before the LHA can provide authorization in writing.
- The Contractor shall not apply adhesive over chalk, dirt, rust, grease, moisture, or any condition detrimental to formation of the durable adhesion.

- Existing surfaces that are damaged or disturbed by new work shall be inspected by the LHA to determine the necessary and required corrective action.
- The Contractor shall install carpet/tile in accordance with the manufacturer's directions within the correct working time while maintaining awareness of the LHA noted and approved factors such as seam location, pattern, pattern direction, aesthetics, and economic use of material.
- Extend carpet/tile under open-bottomed and raised-bottom cabinets and/or equipment.
- Extend all carpet/tile under all thresholds, transition strips etc. In no instance shall the Contractor cut carpet/tile flush with the surfaces unless directed by the LHA
- Provide cutouts where required, and bind cut edges where not concealed by protective edge guards or overlapping flanges
- Install carpet and tile reducer/edge/metallic and non-metallic trim and transition kits, and guards where edge of carpet is exposed; secure guards or reducers to substrate.
- In ramped floor areas, increase anchorage or adhesive. Bond carpet cushion to substrate.
